## General information

---

Name: **MedicationUse**

Version: **1.0**

Publication date: **02-10-2017**

Status wikipage: **final**

This FHIR profile is based on the 2017 version of the ZIB MedicationUse, which can be found on the [wiki \(https://zibs.nl/wiki/HCIM\\_Mainpage\)](https://zibs.nl/wiki/HCIM_Mainpage).

The ZIB MedicationUse is based on the building blocks designed the Dutch Mediation project. More information can be found here on the (Dutch) [wiki \(https://informatiestandaarden.nictiz.nl/wiki/Landingspagina\\_Medicatieprocesses\)](https://informatiestandaarden.nictiz.nl/wiki/Landingspagina_Medicatieprocesses) or for the complete dataset see [ART DECOR \(http://decor.nictiz.nl/medicatieproces/mp-html-20170601T173502/index.html\)](http://decor.nictiz.nl/medicatieproces/mp-html-20170601T173502/index.html)

## Concept

---

MedicationUse describes taking or administering the medication, often in relation to a prescription, but also on the person's own initiative. This describes the pattern of medication use, as reported by the patient themselves, a caregiver or healthcare provider. Documenting medication use provides insight into the use of prescribed medication as well as the use of medication at home.

## Purpose

---

Recording medication information is a very important part of continuity in healthcare. It concerns the core of patient safety. Healthcare professionals in the collaborative branch must always have access to an up-to-date medication overview. Applying the information model will usually involve:

- Recording the patient's intake of self-medication or 'drugs'.
- Recording the medication used during a patient's stay at the hospital.
- Medication verification: recording the active medication profile.
