General information

Name: **PlannedCareActivity**

Version: **1.0**

Publication date: **02-10-2017**

Status wikipage: **final**

This FHIR profile is based on version 1.2.1 (<https://decor.nictiz.nl/art-decor/decor-datasets--zib1bbr-?id=2.16.840.1.113883.2.4.3.11.60.40.3.12.5&effectiveDate=2015-04-01T00%3A00%3A00&conceptId=&conceptEffectiveDate=>) of the building block PlannedCareActivity. The latest version of this building block can be found here on the [wiki](https://zibs.nl/wiki/HCIM_Mainpage) (https://zibs.nl/wiki/HCIM_Mainpage).

Concept

All planned appointments, referrals, treatments and diagnostic procedures, open orders and orders of which the results are not yet known that are relevant to the patient's care may be included. Clinical reminders can also be included here. These are postponed orders that are not yet active. (For example: please note! patient still needs a booster vaccination in x weeks; or please note! check the oral mucosa next time). The PlannedCareActivity concept is a line from the treatment plan. This gives every recipient, user or healthcare facility insight into the planned care for this patient.

Purpose

Recording planned appointments, referrals, treatments, diagnostic procedures, open orders and orders of which the results are not yet known gives every recipient, user or healthcare facility insight in the planned healthcare for this patient. This can prevent situations in which diagnostics and treatment can conflict with each other. This will give the recipient the option to place an order, cancel the order or act in any other way in accordance with their own policy. For orders that do not yet have results, the recipient is informed of the fact that potentially relevant results will be made available (which have to be requested).
