MedicationAdministration

## General information

---

Name: **MedicationAdministration**

Version: **1.0**

Publication date: **02-10-2017**

Status wikipage: **draft**

This FHIR profile is based on the 2017 version of the ZIB MedicationAdministration, which can be found on the wiki ([https://zibs.nl/wiki/HCIM\\_Mainpage](https://zibs.nl/wiki/HCIM_Mainpage)).

The ZIB MedicationAdministration is based on the building blocks designed the Dutch Mediation project. More information can be found here on the (Dutch) wiki ([https://informatiestandaarden.nictiz.nl/wiki/Landingspagina\\_Medicatieproces](https://informatiestandaarden.nictiz.nl/wiki/Landingspagina_Medicatieproces)) or for the complete dataset see ART DECOR (<http://decor.nictiz.nl/medicatieproces/mp-html-20170601T173502/index.html>)

## Concept

---

Administration of medication describes the actual administration of the medication. This can be simply swallowing a tablet, applying ointment or paste, or an infusion that takes a considerable amount of time. The administration can refer to a medication prescription, but can also refer to home medication.

## Purpose

---

To precisely plan the medication to be administered in a chain of collaborating healthcare professionals, it is often best to have information on the most recent administrations of medication, food or blood products.
