VaccinationRecommendation

General information

Name: **Vaccination**

Version: **1.0**

Publication date: **02-10-2017**

Status wikipage: **final**

This FHIR profile is based on version 1.2 (<https://decor.nictiz.nl/art-decor/decor-datasets--zib1bbr-?id=2.16.840.1.113883.2.4.3.11.60.40.3.12.5&effectiveDate=2015-04-01T00%3A00%3A00&conceptId=&conceptEffectiveDate=>) of the building block Vaccination. The latest version of this building block can be found here on the [wiki \(https://zib1bbr.nl/wiki/HCIM_Mainpage\)](https://zib1bbr.nl/wiki/HCIM_Mainpage).

Concept

Immunization can be defined as “Generating natural immunity against pathogens by means of vaccination (active immunization) or by administering immunoglobulins (passive immunization)”.

Only vaccinations are included in this information model. Administering immunoglobulins is part of the medication overview. Vaccinations have lifelong relevance.

Most vaccinations are carried out in the Netherlands as part of the RVP (Rijksvaccinatieprogramma, National Immunisation Program). RVP information is especially important for children.

Vaccinations are also relevant for adult patients such as transplant patients, dialysis patients and patients with a post-splenectomy status. In addition, there are specific indications for the vaccination of risk groups, such as travelers, professionals who come into contact with blood or patients with wounds, weakened immune systems or heightened risk.

Purpose

Documenting vaccinations that have already taken place in a patient is important for things such as the diagnostics of infectious diseases and the indication and planning of (re)vaccinations.
